

Important Information Regarding Immune System Support.

Since the beginning of summer, numerous strains of influenza have become the popular topic on national news programs and in print media. Vaccine options are available also numerous immune boosting options are also beneficial.

Every ingredient in Immuno E is specifically included to work with all the other ingredients to help your “first line” Immune system catch and eliminate disease “BEFORE” you ever show symptoms. There are ingredients in Immuno E that help activate other parts of your Immune system to deal with other body invaders.

Florajen 3® is a combination of the human strains of good bacteria. Almost 80% of your immune system is in the Gastro Intestinal Tract (commonly known as the GUT). Florajen 3® works in the GUT to help your immune system along with the Immuno E. The ingredients in Immuno E feed and fortify the good bacteria in Florajen 3® so that they grow up to 5 times the quantity and strength of Florajen 3® alone.

Shown here from the left are: capsulated XYMOGEN IgG 2000 DF, powdered XYMOGEN IgG 2000 DF, Florajen 3, and Immuno E

When you breathe in viruses or bacteria, they stick to the sinuses and throat. Each time you swallow they go directly into the GUT. That is where the combination of Immuno E and Florajen 3® combine forces to neutralize the invaders. One of the by-products of Immuno E and Florajen 3® is to make Secretory IgA (S IgA). S IgA immediately binds and inactivates those invaders.

Even though Immuno E and Florajen 3® work quickly, if you have immediate concerns (family member is already sick, travel plans, etc.) IgG 2000 DF™ powder provides the same GUT Immunity the instant you drink it. If you need to jump start your Immunity until the Immuno E and Florajen 3® can get up to speed, the IgG 2000 DF™ is a very reasonable addition to your Immune Boosting program.
